HACKATHON SUBMISSION

Volume 1 — Operator Manual

For operators and end users: setup, daily workflows, and operating practice

Team: TraversalAI

Members: Ahmad Alfaqeih, Mustafa Maisara

Coach: Ms. Amal Qutairi

Project Identity and Scope 3

Setup and First Run 3

Daily Operations 4

Operational Safety 4

Operator Reference Map 5

SECTION

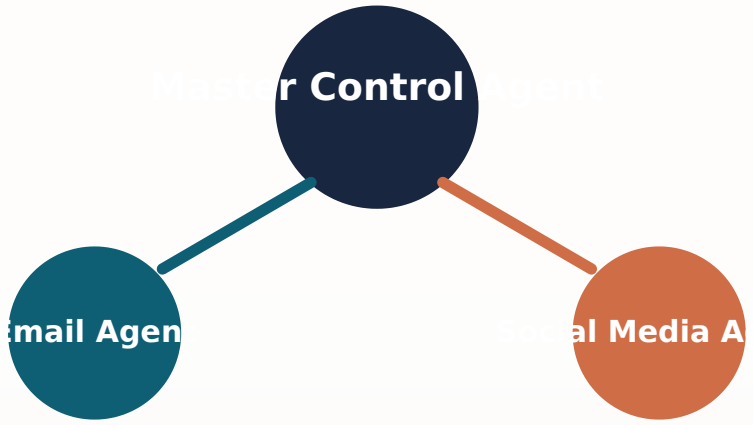
Project Identity and Scope

This manual presents TraversalAI as a hackathon-ready intelligent operations platform under team TraversalAI, built by Ahmad Alfaqeih, Mustafa Maisara, coached by Ms. Amal Qutairi.

- Built-in agents are provisioned automatically during first-run setup.
- The standalone chat UI routes through the gateway only.
- Primary runtime targets are Raspberry Pi 5 and compatible Node environments.

Built-in Agent Orchestration

The main agent coordinates the email and social media specialists



SECTION

Setup and First Run

Install the application, then run onboarding to prepare agents, workspaces, session stores, and gateway credentials.

```
npm install -g traversalai@latest
traversalai onboard --install-daemon
traversalai chat --no-open
```

- Master Control Agent: coordination, delegation, and session oversight.
- Email Agent: inbox tasks, drafting, and organization.
- Social Media Agent: posting, monitoring, and engagement.

SECTION

Daily Operations

In daily use, operators interact through the chat UI or CLI commands to send tasks, switch models, switch agents, and revisit saved sessions.

- Use saved chats to resume prior work instead of restarting context.
- Switch agents by task domain rather than mixing unrelated work in one session.
- Review tool activity before trusting an automated execution result.

End-to-End Flow

From user message through routing, agent execution, tools, and final response

SECTION

Operational Safety

The platform is personal-by-default, not a hostile multi-tenant boundary. Tighten controls when more than one user can reach the same tool-enabled surface.

- Use allowlists and pairing before enabling remote access.
- Keep specialized agents on least-privilege tool profiles.
- Run health and security audit checks regularly.

SECTION

Operator Reference Map
